

Findest™ AI-powered technology monitoring service

€2.000,-
per year

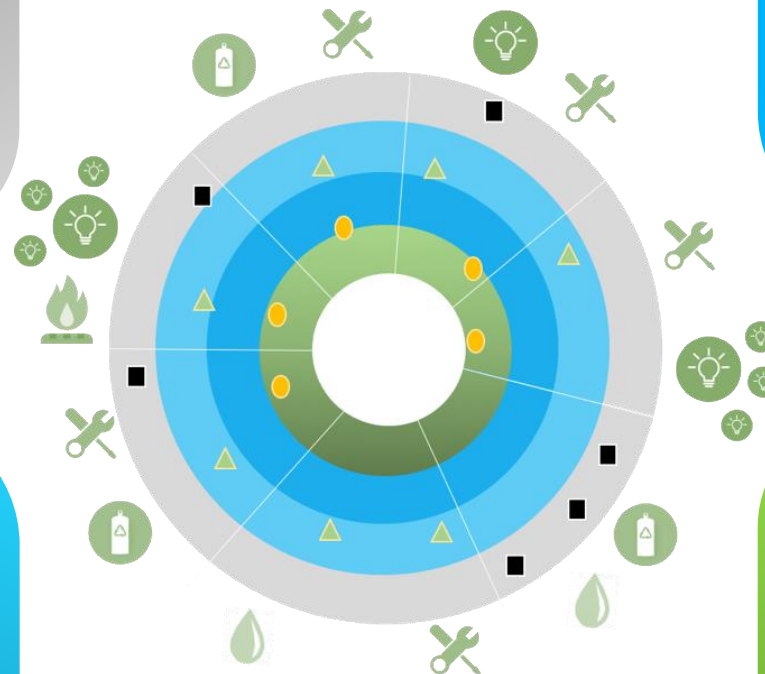

- The Findest™ technology monitoring service keeps you on track with the technology developments that are core to your company.
- Receive quarterly updates on the technology's progress and track them on your online monitoring roadmap.
- Adapt your R&D and innovation strategy based on new technologies added to the monitor, and increased TRL-levels.

Dynamic monitoring

With the monitoring service, you convert a static monitoring strategy into a dynamic one. Carefully follow the developments of technology leads up to the point you can continue development.

Follow TRLs

Get notified when a technology reaches a new level of technology readiness and be able to act quickly when a supplier enters the market.

Add technologies from the scout

Put technologies from a technology scout on your monitoring roadmap. We make sure that our scouts and IGOR^AI update each technology every quarter on your online page.

Identify new emerging tech

Be on par with new developments in a specific field. When IGOR^AI and the technology scout find a new technology that could be a solution, they add the technology to your overview.
